offshore wind projects, for example, won't provide the foundation needed to support billions of dollars of investments in ports and transmission, nor will it achieve economies of scale to drive down costs for future projects. The next generation of clean energy technologies require clear signals that there will be a path to market and the potential for growth for years to come."

"With today's decision, the CPUC has put California on this path, setting in motion the procurement of these resources in the next several years. ACP-California and our members look forward to working with communities across the state on the next critical step: Bringing these projects online in the next decade."
